

Storage sump pallet h286_58

Steel spill pallet for 1 horizontal 200-liter drum, 120x66x57cm, with drum supports for dispensing and palletized base.

The **h286_58 spill pallet** is the specialized technical solution for the **secure storage of one 200-liter drum in a horizontal position**. Designed to prevent the spillage of pollutants into the ground, this unit facilitates **dispensing and transferring** operations in industrial contexts. The structure is made of **sturdy sheet steel** with watertight welds, guaranteeing a safe barrier against accidental leaks.

The integration of **removable painted drum supports** allows the drum to be positioned stably for direct extraction, eliminating the need to move the container during work operations. Thanks to the **palletized configuration** of the base, the sump can be easily moved within production departments using forklifts or pallet jacks.

Technical features

- **Material:** robust watertight welded sheet steel
- **Liquid recovery capacity:** 240 liters
- **Dimensions:** W 120 x D 66 x H 30/57 + 10 cm
- **Horizontal storage:** specific for 1 x 200L drum
- **Structure:** monobloc and palletized for easy handling
- **Included accessories:** removable painted drum supports to facilitate dispensing
- **Finish:** oven-baked powder coating in Blue RAL 5010, resistant to corrosion and chemical agents
