

Stretcher for transporting injured people on ambulance h687_51

Self-loading stretcher with variable heights. Chrome-plated frame. L. 1980 x D. 585 x h. 580 mm.

Self-loading ambulance stretchers represent the main system for handling and transporting patients in the event of local emergencies. This model is **highly functional and versatile**, characterized by a **compact and lightweight structure** and a **variable height system** that assists healthcare professionals during patient transfer onto the stretcher. The **frame** is made of **stainless steel with a chrome finish**, while the **platform** is made of **high-density black polyethylene**. The **legs fold independently**, by activating **color-coded controls**, during the loading phase, and open automatically during the unloading phase. The **backrest** of the stretcher is **adjustable**. Possibility to configure **Trendelenburg anti-shock positions**. The stretcher is **manageable and transportable** even on irregular and rough surfaces, thanks to its **4 base wheels** with a **diameter of 20 cm**. 2 wheels are fixed and 2 are swivelling. Furthermore, the rear wheels are equipped with brakes. For greater safety, the stretcher is complete with **reclining side rails 680 mm long and 200 mm high** and **2 black reflex metal restraint belts**. **Class I medical device according to Dir. 93/42/EEC. 10G Certified.**

Technical features:

- Easily sanitizable polyethylene platform
- Platform color: black
- Stainless steel frame
- Frame finish: chrome-plated
- Color-coded controls
- Adjustable backrest
- Trendelenburg anti-shock positions
- 4 wheels with a diameter of 200 mm (2 fixed and 2 swivelling)
- Brakes on rear wheels
- Reclining side rails
- Variable height system
- Side rail dimensions: L. 680 x h. 200 mm
- Length: 1980 mm
- Depth: 585 mm
- Height under loading trolley wheel: 580 mm
- Weight: 37 kg
- Capacity: 170 kg
- Certification: 10G
- Class I MD according to Dir. 93/42/EEC
