

Support frame for 1 drum h1043_32

Support frame for 1 horizontal inclined 220 l drum. Metal tubular structure with anti-corrosion treatment for outdoor use. Dimensions: 80 x 60 x H 45/38 cm.

The **support frame for 1 drum** (model h1043_32) is a heavy-duty industrial support specifically designed for the stable housing and safety of cylindrical containers arranged in a horizontal position. Developed for **workshops, chemical industries, logistics warehouses, maintenance centers, and transfer stations**, this device is aimed at company safety managers who require an ergonomic and compliant tapping station. The system solves the operational problem of **precarious storage of heavy drums and the risk of accidental rolling** during the dispensing phases of liquids, lubricants, or process fluids. The structure is entirely made of sturdy tubular metal and is subjected to an advanced outdoor anti-corrosion protective treatment obtained with oil-proof and acid-proof polyurethane resins. To ensure maximum visibility in operational departments, the frame is finished with a polyester coating for outdoors in a visible and safe color, complying with the strict requirements dictated by the ISO 3864 standard and the EEC 77/576 - L 229 standard and subsequent amendments.

Technical features

- **Storage capacity:** specific housing for 1 horizontal inclined drum
- **Compatible drum volume:** suitable for 1 inclined 220-liter drum
- **External overall dimensions (WxDxH):** 800 x 600 x 450/380 mm
- **Structure material:** sturdy tubular metal
- **Surface protective treatment:** outdoor anti-corrosion treatment with oil-proof and acid-proof polyurethane resins
- **Type of painting:** polyester painting (specific for outdoor applications)
- **Color and safety:** high-visibility coloring compliant with ISO 3864 and EEC 77/576 - L 229 and subsequent amendments
- **Containment geometry:** calculated inclination (450/380 mm) to promote total liquid dispensing and avoid residues at the bottom of the drum
