

Support frame for 1 x 220 l drum h1043_34

Support frame for 1 horizontal 220 l drum. Metallic tubular structure with anti-corrosion treatment for outdoor use. Dimensions: W 60 x D 60 x H 38 cm. Complies with ISO 3864.

The **support frame for 1 x 220 l drum** (model h1043_34) is a monoblock industrial support specifically designed for the stable housing and securing of cylindrical containers in a horizontal position. Developed for **workshops, chemical industries, logistics warehouses, maintenance centers and decanting stations**, this device is aimed at company safety managers who need a single, ergonomic dispensing station that complies with the law. The system solves the operational problem of **precarious storage of heavy drums and the risk of accidental rolling** during the handling phases of liquids, lubricants or process fluids. The structure is entirely made of robust tubular metal and is subjected to an advanced outdoor anti-corrosion protective treatment obtained with oil-resistant and acid-resistant polyurethane resins. To ensure maximum visibility and safety in operational departments, the frame is finished with a polyester coating for outdoors in a visible and safe color, complying with the strict requirements dictated by the ISO 3864 standard and the EEC 77/576 - L 229 standard and subsequent amendments.

Technical characteristics

- **Storage capacity:** specific housing for 1 drum arranged in a horizontal position
- **Compatible drum volume:** suitable for 1 x 220 liter drum
- **External overall dimensions (WxDxH):** 600 x 600 x 380 mm
- **Structure material:** robust thick-walled metal tubing
- **Surface protective treatment:** outdoor anti-corrosion treatment with oil-resistant and acid-resistant polyurethane resins
- **Type of coating:** industrial polyester coating (specific for outdoor applications)
- **Color and safety in departments:** high-visibility coloring compliant with ISO 3864 and EEC 77/576 - L 229 and subsequent amendments
- **Containment geometry:** shaped cradle to block the circular profile of the drum and prevent lateral movement or rolling
