

Swivel stool for clinics h528_11

Professional medical stool with hands-free foot pedal adjustment, Ø61 cm chrome-plated aluminum base and high-resistance synthetic leather seat.

The **h528_11 medical stool** is an advanced ergonomic solution designed for clinics, specialist offices, and hospital departments. Its main function is to support healthcare personnel during treatments and examinations, ensuring correct posture and maximum freedom of movement. The distinctive feature of this model is the **height adjustment system via a ring with a foot release** positioned at the base: this mechanism allows the operator to vary the seat position without using their hands, preserving the asepsis of gloves and maximum operational hygiene.

The structure is characterized by a **sturdy chrome-plated aluminum base** with five spokes, equipped with twin castors with integrated brakes that ensure millimetric stability and prevent accidental tipping during maneuvers. The circular seat is upholstered in **high-quality technical synthetic leather**, specifically tested to resist wear, tears, and the aggressive action of common hospital disinfectants.
