

Tapered vacuum mattress h687_76

Professional vacuum mattress in self-extinguishing fabric for spinal immobilization. Dimensions 2150x900mm, radiotransparent with 9 handles.

The **vacuum mattress** is a fundamental medical device for out-of-hospital rescue, specifically designed to ensure the **total immobilization** of the patient. Its primary function is to provide excellent cervical and spinal stabilization during the delicate phases of handling and transport. Made with a **robust, non-absorbent, and self-extinguishing fabric**, the device is designed to withstand heavy use while maintaining high hygienic standards.

The pneumatic sealing system relies on an **on/off valve in chromed brass** with a built-in fitting for rubber tubes, a material chosen for its intrinsic resistance to thermal shocks and mechanical stress. The **tapered shape** of the mattress allows for optimal anatomical adhesion to the patient's body, improving overall stability. The two-tone design (orange on the top side and gray on the bottom) facilitates rapid orientation of the device in emergency situations.

Technical features

- **Length:** 2150 ± 30 mm
- **Depth:** 900 ± 30 mm
- **Load capacity:** 150 kg
- **Number of handles:** 9 transport handles
- **Weight:** 4.1 ± 0.3 kg (pump excluded)
- **Materials:** PP, PVC, Nylon, Polystyrene
- **Valve:** On/off in chromed brass with integrated fitting
- **Safety:** Perimeter reinforcement rope and self-extinguishing fabric
- **Diagnostic compatibility:** Radiotransparent, X-ray compatible
- **Regulatory compliance:** Class I Medical Device compliant with EU Reg. 2017/745
- **CND Classification:** V0804
- **Notes:** Vacuum pump not included
