

Teflon patient transfer roll h664_10

Teflon transfer roller with protective coating. Maximum capacity: 200 kg. Dimensions: 82 x 50 cm. Non-foldable.

The transfer board for the disabled is an indispensable product for bedridden patients and people with mobility difficulties who therefore need help to be **transferred from one surface to another** in a safe and simple way. The **non-foldable transfer roll** features a structure formed by an internal core in a special **lightweight foam**, while the external part is covered in **teflon with a protective coating**.

The transfer sheet features **removable and interchangeable trailing edges** and no metallic or magnetic parts. The product undergoes an **antibacterial treatment** to ensure hygiene and cleanliness and can be easily disinfected.

Technical features:

- Material: internal lightweight foam, teflon coating
- Max capacity: 200 kg
- Radiolucent
- Non-foldable
- Dimensions: 82 x 50 cm

The patient transfer roll in teflon h664_10 is also available on the MEPA portal. Find out how to find our company on the [Public Administration portal](#).
