

Telescopic ladder for professional use h858_60

440 cm anodized aluminum telescopic ladder, 150 kg capacity. Soft-close system and EN131 compliance for professional use.

This **professional telescopic ladder** represents a state-of-the-art solution for high-altitude access, designed to combine significant operational extension with maximum compactness during storage. Made of **anodized aluminum**, the structure guarantees high resistance to atmospheric agents and mechanical wear, keeping the weight low for easy transport. The strength of the model is the innovative **assisted closing system**: by pressing the two dedicated buttons, the ladder folds smoothly and slowly, eliminating the risk of crushing fingers and ensuring safe handling in every operational context.

Technical features

- **Material:** High-quality anodized aluminum
- **Configuration:** 15 steps with ribbed surface
- **Safety:** Non-slip steps for optimal stability
- **Maximum capacity:** 150 kg (certified)
- **Maximum extended height:** 440 cm
- **Closed dimensions:** 97 x 48 x 9 cm
- **Reference standard:** Complies with EN131 safety standards
- **Mechanism:** Controlled slow closing via buttons
