

Telescopic ladder h858_56

Anodized aluminum telescopic ladder 260 cm, 9 anti-slip rungs and soft-close safety system. Compact and ideal for maintenance.

The **professional telescopic ladder** represents an advanced solution for maintenance, installation, and renovation work in contexts where portability is essential. Made with a supporting structure in **anodized aluminum**, it guarantees high resistance to wear and atmospheric agents, keeping the operator's hands clean thanks to the surface treatment. Safety is guaranteed by a **soft-close system** that allows the ladder to fold slowly by pressing two buttons, preventing accidental crushing. The compact design facilitates transport in small vehicles and storage in small spaces.

Technical specifications

- **Material:** anodized aluminum
- **Number of rungs:** 9 rungs with knurled non-slip surface
- **Maximum capacity:** 150 kg
- **Maximum extended height:** 260 cm
- **Closed dimensions:** 79 x 46 x 9 cm
- **Safety standard:** produced according to EN 131 standards
- **Closing mechanism:** controlled pressure system with 2 buttons
