

Thermal first aid blanket h708_25

Emergency blanket with thermal pads. Dimensions: 86 x 152 cm. Capable of maintaining heat for 10 hours.

Thermal blanket for ambulances and healthcare workers performing rescue or relief operations for people involved in accidents or natural disasters. Thanks to the presence of thermal pads, it allows reaching a **minimum temperature of 40°C in 15-20 min** and maintaining heat for a full 10 hours. Specifically designed to **prevent hypothermia** and manage the body temperature of patients. Given its robustness, it **can also be used as a transfer sheet**.

Technical features:

- Dimensions: 86 x 152 cm
- With thermal pads
- Minimum temperature of 40°C reachable in 15/20 min
- Temperature maintenance for 10 hours
- Can also be used as a transfer sheet with a capacity of 113 kg
