Transfer sling h23905

Ergonomic transfer sling equipped with 4 wide padded and seamless side handles. Transfer capacity: 180 Kg. Dimensions: 60 x 20 cm.

Small, light, resistant and easy-to-use ergonomic transfer sling. It is an excellent support to assist the operator in transferring patients with partial mobility. It can be used for small movements/ repositioning/ rotations on bedridden patients with no mobility.

The sling consists of a coated polyethylene core and is equipped with **four padded and seamless side handles**. The main advantages are the handles that offer a comfortable working position for the operator, the **non-slip surface** on the inside that prevents the patient from slipping sideways; its use changes depending on where it is positioned and it is easy to remove from the patient, carry and store.

Technical features:

- Material: polyethylene
- Number of handles: 4
- Capacity: 180 Kg
- Dimensions: 60 x 20 cm
