

Two-seater swing h27107

Professional two-seater swing h27107 in nordic pine wood. Includes safety cradle seats, ideal for public parks and schools. The professional swing **h27107** is a playground equipment designed for the setup of play areas in collective contexts that require high standards of safety and resistance. Thanks to the load-bearing structure in **nordic pine wood**, the product blends harmoniously into natural environments such as public parks, school gardens and hospitality facilities, guaranteeing a long operational life even in conditions of prolonged exposure to atmospheric agents.

The two-seater configuration with **cradle seats** is specifically designed to offer optimal containment support, making play accessible and safe for children in the 0-12 age group. Mechanical solidity is ensured by steel components and galvanized bolts, which prevent premature wear and oxidation of the structural joints.

Technical specifications

- **Structural material:** Selected nordic pine wood
- **Configuration:** 2 seats with cradle seats included
- **Seat material:** Anti-shock rubber with internal metal reinforcement core
- **Metal components:** Steel fixing brackets and galvanized bolts
- **Total dimensions:** 155 x 310 x h 165 cm
- **Minimum space required:** 410 x 650 cm
- **Free fall height (HIC):** 90 cm
- **Usage target:** Collective (schools, parks, public areas)
- **Age range:** 0-12 years
- **Production:** Made in Italy
