

Universal absorption kit in wall-mounted cabinet h1043_59

Universal absorption kit h1043_59 in wall-mounted cabinet. Fixed wall solution for decontamination. Dimensions: 61.6 x 27 x 73.5 cm.

The **universal absorption kit in wall-mounted cabinet h1043_59** is an emergency response system structured to respond quickly and effectively to decontamination problems in industrial and commercial environments. Developed for **safety managers (RSPP), technical offices, workshop managers, warehouses, and production departments**, this station is aimed at professionals who need a wall-mounted fixed station, easily accessible and organized for emergencies. The product solves the main operational problem of **containing and collecting accidental spills of various industrial liquids, aqueous liquids, coolants, and solvents, optimizing floor space thanks to the suspended installation and preventing the propagation of contaminants towards transit areas or drainage pipes**. The external housing is made by combining high-resistance polypropylene and polyethylene elements, ensuring perfect protection of the absorbent materials contained inside from dust or external agents.

Technical features

- **Model:** FOR UNIVERSALS
- **Guaranteed minimum absorption capacity:** LT. 55
- **System type:** emergency response kit in wall-mounted cabinet designed to solve decontamination issues
- **Cabinet and protection component material:** polypropylene, polyethylene
- **External housing width:** 616 mm
- **External housing height:** 735 mm
- **External housing depth:** 270 mm
- **Logistics configuration:** fixed wall-mounted module
