

Ventilated anti-decubitus mattress with 4 densities h230_118

Full ventilated anti-decubitus mattress in polyurethane foam with 4 densities.

Anti-decubitus mattress, made of **open-cell polyurethane foam** with **four different densities**, which allow it to better adapt to the patient's needs. **Head:** polyurethane **density 35**. **Pelvis:** polyurethane **density 30** elastic. **Feet:** polyurethane **density 25**. **Base of containment with lateral containment edges:** polyurethane density 32 hard. The processing of the upper surface guarantees the best **air circulation between the mattress and the patient**. Autoclavable with saturated steam at **120°**.
Indications: prevention of pressure sores.

Technical features:

- Material: open-cell polyurethane foam
- 4 different densities
- Head polyurethane density 35
- Pelvis polyurethane density 30 elastic
- Feet polyurethane density 25
- Containment base with lateral containment edges: polyurethane density 32 hard
- Dimensions: L.195xW.85xH.14 cm
- Supported weight approx. 120 kg

**Fireproof version available on request (subject to quotation)

INFORMATION

- **Depth** 14 cm
- **Width** 85 cm
- **length** 195 cm
- **Type** in poliuretano espanso

Ventilated anti-decubitus mattress with 4 densities h230_118

Ventilated anti-decubitus mattress with 4 densities h230_118

Depth: 14 cm

Width: 85 cm

Length: 195 cm

Typology: in poliuretano espanso
