

Veterinary recovery box 2 places h601_20

Veterinary recovery cage in Aisi 304 stainless steel, 2 places, with conductive braking wheels. Dimensions W.60.5 x D.72 x H.137.5 cm.

The **animal recovery cage** is an essential tool for small surgeries and veterinary clinics. It is used for the **hospitalization of pets** undergoing **surgical operations** or specific treatments, allowing patient isolation and preventing unwanted behavior or damage to IV drips and bandages.

The structure is built in **Aisi 304 stainless steel**, a material that guarantees high impact resistance and compliance with current regulations. Stainless steel allows for **rapid and effective disinfection**, eliminating any pathogens and maintaining high hygiene standards. The **conductive wheels for electromagnetic static** (2 of which are braking) facilitate the transport of the cage between various environments of the facility.

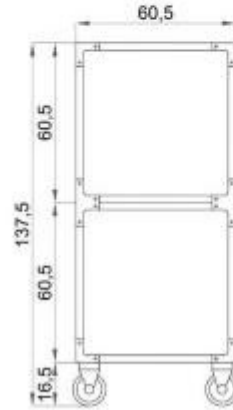

Technical features

- Material: Aisi 304 stainless steel
- Capacity: 2 vertical places
- Conductive wheels for electromagnetic static (2 braking)
- Dimensions: W.60.5 x D.72 x H.137.5 cm
