

Veterinary recovery cage h648_51

Painted steel veterinary cage, foldable, 106x71x77 cm, with two doors and plastic support for recovery and transport.

The veterinary recovery cage is an essential tool in veterinary practices and animal shelter facilities. Designed to serve as a recovery box in clinics, an observation station, or a car transport cage, it offers a versatile and reliable solution for the safe containment of animals during critical care and mobility phases.

The structure is built from **sturdy black painted steel wire**, ensuring durability and resistance even in high-frequency use environments. The design features **two access doors** — one longitudinal and one transverse — which facilitate animal positioning and monitoring operations from different angles. The base is equipped with a **removable retractable plastic support**, which keeps the cage elevated from the floor, making cleaning operations easier. A crucial element is the **folding capacity**, which allows for significant space savings when the cage is not in use, making it ideal for clinics with optimized storage needs.

Technical features

- Dimensions: W. 106 x D. 71 x H. 77 cm
- Material: sturdy steel wire
- Painting: black
- Capacity: 1 place
- Configuration: foldable cage
- Access: 2 doors (one longitudinal, one lateral)
- Closure: secure with practical carrying handle
- Base: removable plastic support
- Maintenance: easy to clean and disinfect
