

Veterinary recovery cage h648_52

Foldable veterinary cage in black painted steel, 91x61x66 cm, double door, removable plastic support and carrying handle. For recovery and post-operative monitoring.

The veterinary recovery cage is a practical and robust solution for facilities requiring temporary hospitalization spaces and post-operative monitoring. Designed for use in both veterinary clinics and for safe transport in cars, it provides a protective and hygienic environment dedicated to animal welfare during critical recovery phases.

Made of **sturdy black painted steel wire**, the cage ensures durability and resistance in the clinical environment. The structure is equipped with **two independent access systems: a longitudinal door and a transverse door**, which ensure operational versatility during animal insertion and management procedures. The **ergonomic handle** facilitates transport, while the **removable retractable plastic support** at the base allows for thorough cleaning.

A significant advantage is the **folding capacity**, which reduces bulk during storage in confined areas, a crucial aspect for clinics with limited space.

Technical features

- **Dimensions:** W. 91 × D. 61 × H. 66 cm
- **Capacity:** 1 animal
- **Frame material:** steel wire
- **Painting:** black (oxidation resistant)
- **Access systems:** longitudinal door and lateral transverse door
- **Locking:** secure locking system
- **Base support:** removable retractable plastic
- **Carrying handle:** practical and robust
- **Configuration:** foldable to reduce bulk
- **Maintenance:** easy to clean and disinfect
