

Veterinary stretcher h797_07

Veterinary hospitalization cage on wheels with stainless steel frame and removable radiolucent top.

Veterinary stretcher, stainless steel structure and **removable radiolucent top**. The stretcher is used to transport animals safely and efficiently, especially in emergency situations, essential for professionals in the sector involved in animal X-rays or ultrasounds. The radiolucent top allows radiology technicians to take images without having to move the animal. The stretcher is equipped with transport handles and they are easily fixed in position to ensure stability during movement.

Technical Features:

- Material: stainless steel
- Removable radiolucent top
- With transport handles
