

Veterinary stretcher with holes h601_70

Stretcher with holes and removable tray for the safe transport of animals. Dimensions: W 110 x D 60 x H 82.4 cm.

The **H601_70 veterinary stretcher** has been designed to ensure **maximum safety, hygiene and practicality** during the transport of animals, and is particularly suitable for **veterinary ambulances, canine units, mobile clinics and rescue vehicles** working with **pets and rescue animals**.

Thanks to the **perforated structure**, the stretcher ensures high **ventilation** and facilitates the **drainage of liquids and residues**, keeping the surface clean even during **longer transfers**. The presence of a **removable internal tray** allows for quick and effective cleaning, essential in emergency situations or in high-frequency use contexts.

Made with resistant materials, it is designed for **intensive professional use** and can also be **custom-made on request** to adapt to different vehicles and transport configurations. The standard dimensions of **110 x 60 x H 82.4 cm** make it compatible with most veterinary ambulances and equipped vans.

Choose the **H601_70 stretcher** to ensure safe, hygienic and professional transport for your 4-legged friends. Contact us for customized versions or multiple supplies.

FAQ:

1. **Who is this stretcher intended for?**

To veterinary clinics, animal ambulances, canine units and animal rescue.

2. **Is the stretcher easy to clean?**

Yes, thanks to the removable internal tray and the drainage holes, cleaning is simple and fast.

3. **Is it also suitable for large animals?**

Standard dimensions allow the transport of medium and large dogs. For special needs, it is available custom-made on request.

4. **Can it be fixed inside the ambulance?**

Yes, the structure is compatible with housing in equipped rescue vehicles.

5. **Is it possible to customize the dimensions?**

Yes, on request we produce the stretcher in customized sizes.

Mini buying guide:

When choosing a **stretcher for animal transport**, it is fundamental to evaluate three key elements: **hygiene, safety and compatibility with vehicles**.

A **perforated** surface, as in the case of the H601_70 model, ensures breathability and prevents the accumulation of liquids or dirt.

The presence of a **removable tray** allows for quick sanitization between transports.

It is important that the structure is robust but also **customizable**, to adapt to different vehicles or breeds.

Choose a stretcher designed specifically for professional veterinary use to ensure **comfort and protection** for the animal, and practicality for operators.

Veterinary stretcher for ambulance, perforated stretcher for animals, stretcher for canine units, custom-made animal transport device, veterinary rescue stretcher, safe animal transport mobile clinic.
