

Wall-mounted clog rack for operating rooms h640_29

Wall-mounted stainless steel clog rack for operating rooms, capacity 40 pairs. Space-saving vertical structure for maximum hospital hygiene.

The **wall-mounted clog rack h640_29** is a professional module designed for the organization of filter zones and access to operating rooms. The structure allows technical footwear to be kept tidy and readily available, eliminating floor clutter and facilitating floor sanitification operations. Made entirely of **stainless steel**, it responds to the rigorous hygiene protocols of hospital environments and laboratories, guaranteeing resistance to corrosion and frequent disinfection cycles.

Technical features

- **Material:** High-resistance stainless steel
- **Load capacity:** 40 pairs of clogs using special preformed hooks
- **Installation:** Wall mounting for vertical space optimization
- **Dimensions:** W.123.5 x D.13 x h.218 cm
- **Design:** Open structure to promote footwear ventilation
