

Water anti-decubitus mattress h13_273

PVC anti-decubitus mattress, 200x93x11.5 cm. Hybrid structure with air border and 3 water elements. Double-sealed stitching for medical use.

The **anti-decubitus mattress** is a technical solution specifically designed for use in healthcare and assistance settings. Made of **high-resistance PVC**, this aid is structured to facilitate the patient's micro-movements and ensure optimal pressure distribution across the entire supporting surface, preventing the formation of tissue lesions.

The hybrid configuration features an **inflatable air perimeter border** and **three internal water-filled elements**, a combination that ensures stability and anatomical adaptation. The **double-sealed stitching** reinforces the structure, ensuring maximum liquid tightness and prolonged durability even under intensive use conditions.

Technical features

- **Material:** Medical grade PVC
- **Construction:** High-frequency double heat-sealed stitching
- **Configuration:** Air perimeter border and 3 independent water sectors
- **Single element dimensions:** 69 x 60 x 11.5 cm
- **Overall dimensions:** 200 x 93 x 11.5 cm
- **Equipment:** Hand pump for the air border and filling tube included
