

Waterless boot cleaner with 3 brushes h767_05

Dry shoe cleaner in painted steel with 3 brushes. Dimensions 440x390x230 mm. Cleans footwear and boots without the use of water or electricity.

The **professional boot cleaner** in powder-coated steel is a mechanical solution designed for the quick and effective cleaning of footwear and boots in technical and industrial environments. The device solves the need to remove dust, dirt, and coarse debris before accessing offices, locker rooms, or common areas, operating in total autonomy from utility networks.

The system is based on the mechanical action of **3 non-irrigated brushes** (one central and two lateral) that wrap around the footwear, ensuring the removal of excess dirt with a simple foot movement. The robust steel structure ensures stability during use and resistance to wear over time.

Technical features

- **Width:** 440 mm
- **Length:** 390 mm
- **Height:** 230 mm
- **Material:** powder-coated steel
- **Weight:** 6 kg
- **Cleaning system:** 3 non-irrigated brushes (1 central and 2 lateral)
- **Water supply:** not required (waterless operation)
- **Power supply:** not required (operation without electricity)
- **Ease of use:** intuitive manual operation
