

Waterproof anti-decubitus mattress h99_50

Anti-decubitus mattress in expanded polyurethane and viscoelastic foam.

Anti-decubitus mattress for the prevention of pressure sores in subjects assessed at medium risk or with **injuries up to the 2nd stage** (EPUAP classification). It ensures a contact pressure reduction of less than 18 mmHg. Features: The **mattress is made of two layers**, the upper one is in **viscoelastic foam** (memory foam), while the lower layer is in **polyurethane foam**, with longitudinal and diagonal support intersections to provide better stability and comfort to the patient. It is equipped with an excellent **ventilation** system that gives it an ideal microclimate. The mattress is covered with a bi-elastic removable cover, which minimizes shear forces. **Made of PU-TEX**, waterproof to liquids but permeable to vapor, in order to ensure excellent breathability. The mattress cover seams are ultrasonic welded, the zip that allows its closure is “covered”, to avoid trauma to the patient.

Technical features:

- Material: expanded polyurethane and viscoelastic memory foam
- Bi-elastic removable PU-TEX cover lining
- Waterproof to liquids
- Permeable to vapor
- Breathable
- Dimensions: 200x90x14 cm
