

Watertight oil spill kit 31 l absorbency h1043_41

Water-repellent emergency response kit for oils and petroleum derivatives (even in water) with a minimum absorbency of 31 liters. 30 l UN-approved watertight container with galvanized band, mm ø 320x510h.

The **watertight oil spill kit with 31 l absorbency** (model h1043_41) is a mobile industrial and environmental safety system, designed specifically for the rapid containment and remediation of accidental hydrocarbon spills. Developed for **mechanical workshops, ports, shipyards, chemical industries, fuel depots, and maintenance departments**, this device is aimed at company safety managers (RSPP) and environmental technicians who must operate in compliance with strict ecological protection regulations. The system solves the operational problem of the **immediate confinement of waste oils, fuels, and petroleum derivatives scattered on the ground or floating on bodies of water**; thanks to the selective and water-repellent properties of the internal materials, the kit absorbs hydrocarbons while completely repelling water. The equipment is stored inside a 30-liter watertight cylindrical polyethylene drum, provided with anti-UV protection and a safety hermetic closure with an anti-corrosion galvanized metal band, complying with strict international regulations for the transport of dangerous goods.

Technical features

- **Kit type and application:** Mod. FOR ABSORPTION OF OILS AND PETROLEUM DERIVATIVES (effective even in the presence of water thanks to water-repellent properties)
- **Certified minimum absorption capacity:** 31 liters (LT. 31)
- **Geometric dimensions of the container (ØxH):** 32 x 51 cm (mm 320 x 510)
- **Nominal volume of the storage drum:** 30 liters
- **External container material:** high-density polyethylene with ANTI-UV treatment (resistant to sunlight)
- **Structural closure system:** watertight lid with anti-corrosion galvanized metal perimeter band
- **Approvals and transport compliance:** certified according to UN, ADR, RID standards
- **Total weight of the ready-to-use kit:** approximately 5 kg

Detailed content of the absorbent kit

- **20 Special oil absorbent pads:** dimensions 41 x 46 cm each (indicated for surface spills and finishing cleaning)
- **4 Absorbent socks (cylindrical barriers):** dimensions Ø 7.6 x 122 cm each (designed to surround the spill and block the expansion of the flow)
- **1 PROTECT KIT:** set of accessory devices for personal safety and standard handling of waste materials
