

Watertight universal spill kit 70 Lt absorbency h1043_40

Universal watertight emergency spill kit with a minimum absorption capacity of 70 liters. 60 Lt polyethylene container with galvanized metal band closure, mm Ø 410x630h.

The **universal watertight kit with 70 Lt absorbency** (model h1043_40) is a mobile industrial safety system designed for the rapid management and containment of accidental chemical or oily spills. Developed for **workshops, production departments, logistics warehouses, laboratories, and liquid transfer areas**, this equipment is aimed at company safety managers (RSPP) and environmental management teams needing to comply with workplace ecological protection regulations. The system solves the operational problem of the **immediate confinement of dangerous liquids and oils scattered on the ground or in water**, preventing contamination of drains and reducing the risk of personnel slipping. All absorbent materials are stored inside a robust 60-liter blue polyethylene cylindrical watertight drum, equipped with a secure airtight closure with a galvanized metal band that protects the contents from moisture and external agents before use.

Technical characteristics

- **Kit type and model:** Mod. FOR UNIVERSALS (suitable for a wide range of industrial liquids, hydrocarbons, and aqueous solutions)
- **Certified minimum absorption capacity:** 70 liters (LT. 70)
- **Container geometric dimensions (ØxH):** 41 x 63 cm (mm 410 x 630)
- **External container configuration:** high-density polyethylene watertight cylindrical drum
- **Nominal volume of the storage drum:** 60 liters
- **Locking and closure system:** galvanized steel perimeter metal band
- **Total weight of the ready-to-use kit:** approx. 8 kg
- **Environmental application suitability:** usable for the absorption of dangerous liquids and oils on soil and in water

Detailed content of the absorbent kit

- **20 Absorbent pads:** dimensions 41 x 46 cm each (ideal for surface spills and finishing cleaning)
- **4 Absorbent pillows:** dimensions 46 x 46 cm each (specific for blocking continuous flows and absorbing large concentrated volumes)
- **5 Absorbent socks (cylindrical barriers):** dimensions Ø 7.6 x 122 cm each (designed to perimeter the area and circumscribe the spot)
- **1 KIT PROTECT:** provision of accessory devices for safety and handling of waste materials
