

Wheel stop for parking h729_60

Car wheel stop for parking h729_60 (large model) made of Class 4 autoclave-treated pine wood resistant to rot. Equipped with an 80 mm diameter and galvanized steel ground fixing brackets. Dimensions: 110x155x2000 mm.

The **wheel stop for parking h729_60** is a high-resistance delimitation, stop, and alignment device for vehicles, specifically developed for **municipal administrations, public technical offices, employers, indoor and outdoor urban designers, traffic managers, and corporate safety officers**. This element responds to the organizational need to optimally structure parking areas and preserve the integrity of perimeter infrastructures, solving the operational problem of **creating an accessible and orderly parking lot, providing drivers with precise physical feedback during maneuvers across the entire width of the stall and preventing vehicles from invading pedestrian walkways, flower beds, or colliding with walls and barriers**. From a material perspective, the wheel stop wedge is entirely made of Class 4 pressure-treated pine wood, a rigorous technical specification that makes the biological structure of the wood completely resistant to rotting, the action of parasites, and atmospheric factors resulting from continuous horizontal exposure on the ground. The main body has a diameter of 80 mm and is firmly anchored to the road surface via robust ground fixing brackets made of galvanized steel to prevent oxidation and rust. This specific large model develops a section with a height of 110 mm, a width of 155 mm, and a total length of 2000 mm (2 meters), ideal for covering the entire width of the vehicle.

Technical characteristics

- **Product type:** wheel stop for parking – wheel stop wedge for accessible parking
- **Code reference:** h729_60
- **Model configuration:** large model
- **Total structural length:** 2000 mm
- **Total base width:** 155 mm
- **Total height from the ground:** 110 mm
- **Diameter of the cylindrical wood profile:** 80 mm
- **Barrier body material:** pine wood
- **Protective wood treatment:** Class 4 industrial autoclave treatment (specific for permanent outdoor exposure in direct contact with the ground or constant humidity)
- **Material resistance properties:** resistant to rot and biological deterioration
- **Anchoring devices included:** ground fixing brackets made of galvanized steel
- **Installation suitability:** outdoor parking stalls, company yards, commercial parking lots, logistics areas, and public rest areas
