

Wood children swing with two seats h17201

Northern pine wood children swing, with two seats. Hot-dip galvanized steel elements.

Two seater swing entirely made of **northern pine wood**.

The motivation relates to the high capacity of this type of wood to **withstand** atmospheric elements and pressure. **Northern pine**, unlike the one that grows at lower latitudes, it's highly durable and suited to the outdoors constructions. Plus, this wood was treated with **high pressure impregnation in autoclave**, process that protects the material, increasing the stability and **delaying** the natural aging.

The structure of this swing is rather classic. Four circular pillars placed in oblique cross at the top and held together by a beam, circular too.

All pieces are welded together via **galvanized steel bolts**. Zinc-coating process sharpens metal natural qualities, adding others, such as rust-proof and resistance to shock and abrasion.

Just alike is the realization process of the **chain** that holds the two seats. The galvanizing process made it even **smoother**, in order to avoid any risk of scratching. The chain links are narrow enough to prevent your child's fingers to get stuck.

Specifications:

- Height: 270 cm
- Width: 350 cm
- Depth: 350 cm
- Total area of ??space: 359x470 cm
- Beam diameter: 12 cm
- Wood impregnated in autoclave
- Galvanized steel

INFORMATION

- **swing material** wood
- **swing type** double
- **Altezza in millimetri** 3000.0000
- **Larghezza in millimetri** 3500.0000
