

## Wooden waste bin h28741

Urban furniture waste bin in galvanized steel and Nordic pine slats. Capacity 27L, inground fixing for parks, gardens and condominium walkways.

This waste bin is designed to combine waste management functionality with the aesthetic decor of open spaces. The combination of the **internal steel structure** and the wooden cladding allows for harmonious integration into natural contexts, public parks, and high-end residential areas, solving the visual impact problem typical of industrial containers.

## Technical characteristics

- **Container:** made of galvanized steel sheet with 10/10 thickness, internal dimensions 28 x 44 cm.
- **Cladding:** Nordic pine slats with 90x20 mm section, pressure-treated in autoclave with non-toxic salts for weather resistance.
- **Support structure:** round steel tube pole with 50 mm diameter and 2 mm thickness, complete with black polyethylene finned head cover.
- **Anti-corrosion treatment:** hot-dip galvanizing of the support pole according to UNI EN ISO 1461 by immersion in molten zinc according to UNI EN 1179.
- **Emptying system:** quick release mechanism protected by a lock with an Allen key supplied.
- **Total dimensions:** W 32 x D 43 x H 125 cm.
- **Capacity:** approximately 27 liters.
- **Installation:** prepared for anchoring by direct burial in the ground.
