

## Work harness with dorsal attachment h1046\_11

h1046\_11 work harness in HT polyester with raised dorsal attachment. EN 361 certified, tested to 150 kg, ideal for rescue.

The **h1046\_11 work harness with dorsal attachment** is a complete personal protective equipment, specifically developed for **work-at-height operators, rescue teams, industrial technicians and maintenance experts**. This device responds to the need to operate safely during positioning and fall arrest activities, solving the operational problem of **quickly donning the equipment and accessing the rear anchorage even when carrying bulky loads on the shoulders, such as technical backpacks or oxygen tanks, while maintaining an immediate operational status and high breathability**. The structure is entirely made of robust HT (High Tenacity) polyester webbing and is equipped with a new ergonomic and breathable rear padding. The front attachment point consists of two large high-visibility fluo yellow rings, which can also be used as handles for assisted operator movement. Entirely produced in Italy and certified according to the EN 361 standard, the harness is tested to tolerate an extended workload of up to 150 kg and integrates quick-release buckles on the leg loops to facilitate donning.

## Technical features

- **Product type:** full harness for work at height and rescue
- **Reference regulatory standards:** EN 361
- **Structural webbing material:** HT (High Tenacity) polyester
- **Padding configuration:** ergonomic, restyled, and breathable rear padding designed to facilitate donning
- **Dorsal attachment positioning:** moved upwards to be easily accessible even when carrying material on the shoulder (oxygen tanks, backpacks, etc.)
- **Front attachment point configuration:** made with two large fluo yellow rings that facilitate identification, usable as handles for operator movement
- **Accessory attachment systems:** webbing gear loops
- **Chest adjustment components:** closure and positioning buckle (chest) for an effective and immediate operational setup
- **Lower adjustment components:** quick-release buckles on the leg loops
- **Certified mechanical resistance:** tested to 150 kg
- **Manufacturing and origin:** high-quality product entirely made in Italy

- **Size specifications and structural weights:**

- **Size S:** weight 850 g, waist measurement 60/95 cm, leg loops measurement 40/60 cm
- **Size M/L:** weight 900 g, waist measurement 72/105 cm, leg loops measurement 50/62 cm
- **Size XL:** weight 950 g, waist measurement 89/130 cm, leg loops measurement 62/80 cm
