

Wrist restraint made of MTP h983_15

Wrist restraint with ties for patient containment. Velcro closure, washable. Tie length: 120 cm.

The **medical wrist restraint in MTP code H983_15 for hospitals** is a device indicated for the **immobilization of the patient's wrist** in specific situations, for example during **infusion therapies or specific treatments**, where it is essential to prevent the patient from moving involuntarily, risking the removal of needles or catheters.

Mainly used in **hospitals, clinics, emergency departments, intensive care, and nursing homes (RSA)**, this wrist restraint ensures **effective containment** while remaining comfortable thanks to the **high-quality materials** used in its construction.

The device is made of **MTP velvet (100% polyamide or polyester)** for the external lining, while the **internal padding is made of ether-based polyurethane**, a material that offers comfort and resistance. The **120 cm cotton ties** allow for secure attachment to the bed frame and can be knotted at one or two points for greater control, according to clinical needs. The **Velcro closure** makes the wrist restraint easy to apply and adjust, ensuring a stable and adaptable fit for different body types.

The product is **non-sterile** and **reusable**, designed for simple maintenance. It can be **hand washed in lukewarm water up to 30°C**, using a mild detergent, avoiding direct heat sources and ironing, according to the instructions provided.

This device must be used **only in a healthcare setting** and under the responsibility of medical personnel. It is not suitable for purposes not specifically provided for in the technical documentation.

Order the **H983_15 medical wrist restraint** now to ensure safety and comfort in healthcare treatments. For multiple orders or hospital supplies, request a personalized quote.

Technical characteristics:

- **External material:** MTP velvet (100% polyamide or polyester)
- **Internal padding:** ether-based polyurethane
- **Binding:** 100% cotton
- **Tie length:** 120 cm
- **Closure system:** adjustable Velcro
- **Usage:** hospital internal use
- **Device:** non-sterile
- **Maintenance:** hand wash max 30°C, do not iron, do not tumble dry

User benefits:

- **Promotes:** patient safety during prolonged medical therapies.
- **Reduces:** the risk of accidental removal of needles or IV devices.
- **Easy:** to apply and adjust thanks to the Velcro.
- **Comfort:** guaranteed thanks to the padding and soft materials.
- **Reusable:** and washable, allowing for savings and hygiene.

FAQ:

1. Is the wrist restraint sterile?

No, the device is non-sterile and should not be used in contexts requiring sterile material.

2. **How is it applied correctly?**

The cuff is worn and secured with the Velcro. The ties should be knotted and secured to the bed frame.

3. **What is the length of the ties?**

The ties are 120 cm long.

4. **Is it possible to wash it?**

Yes, it should be hand washed at a maximum of 30°C, following the instructions. It should not be ironed or tumble dried.

5. **Is it indicated for home use?**

No, it is a device for exclusive healthcare use, to be used under medical supervision.

Mini buying guide:

When choosing containment devices like wrist restraints for hospital use, it is essential to evaluate the **quality of materials**, the **security of the closure**, and the **ease of cleaning**.

The H983_15 wrist restraint is ideal for situations where it is necessary to **limit patient movement in a controlled manner**, without causing discomfort.

The presence of **long and resistant ties** allows for stable attachment to the bed or structure, while the MTP lining ensures **softness in contact with the skin**.

It is recommended to purchase a sufficient number of devices to rotate, so as to always ensure availability even during washing or sanitization phases.
