

Wall lamp in wrought iron h16813

Wall lamp in wrought iron treated in the galvanizing bath, with steel reflector. Product made in Italy

Lamp in wrought iron treated in the galvanizing bath, with steel reflector, double glazing black / white.

Galvanizing is the process by which it is applied a zinc coating on a metal artifact generally of steel to protect it from galvanic corrosion: it in fact limits the formation of micro electrolytic cells to anodic action in the grain boundaries. Zinc is less electronegative (ie less noble) of the steel, and then, in case of breakages or porosity of the protective film, itself becomes the sacrificial anode in the electrolytic corrosion and is consumed if there is closure of the field lines.

Product made in Italy.

Specifications:

Voltage 230 V 50 Hz Type E27 26 27mm Degree of protection IP23 class 1 Dimensions 33cm x 82cm x 35cm

INFO

- **Height** 33 cm
- **Width** 82 cm
- **Depth** 35 cm
- **Material** wrought iron
- **Typology** wall
