

Bench design in polyethylene h6424

Design bench for outdoor and indoor use made in polyethylene, recyclable and exterior resistant. Available in a wide range of colors

A bench in a garden is not only a place to sit but becomes a central feature, a focus point, a place that attracts the eye. The multiple and varied use of the bench allows it to adapt to any type of garden and space. For this reason, its shape is neutral and simple. The classic English wooden bench is the formal and design reference used. The bench seeks to solve a set of formal, functional, production and commercial problems but, above all, the design attempts to evoke the idea of the bench.
